07/01/08 00:00 CST 0 Flood (due to Planned Dam Release)
07/18/08 17:00 CST 10K Source: Official NWS Observations

Reservoir releases from the upstream Corps of Engineers' lakes prolonged the high water event and kept the stage at Augusta above flood stage into the middle of the month. While the stage remained slightly above flood stage, farmers planted down to the water's edge. A brief period of higher stages during the week after the 4th of July holiday put water over several hundred acres of newly sprouted soybeans and killed the tender plants. Additional damages were noted.

 Source: Official NWS Observations

Reservoir releases from the upstream Corps of Engineers' lakes prolonged the high water event and kept the stage at Augusta above flood stage into the middle of the month. While the stage remained slightly above flood stage, farmers planted down to the water's edge. A brief period of higher stages during the week after the 4th of July holiday put water over several hundred acres of newly sprouted soybeans and killed the tender plants. Additional damages were noted.

Reservoir releases from Bull Shoals and Norfork Dams caused minor flooding along the lower White River in the Augusta reach of the river. Primary impacts were to the agricultural community.

Location Date/Time Deaths & Property & Event Type and Details Injuries Crop Dmg

Numerous trees were blown down, power lines were knocked down, and the roof was taken off a farm shop.

The remnants of Hurricane Dolly passed by just to the north of Arkansas on the 31st. The position of this low pressure, along with a weak cold front pushing into Arkansas triggered severe storms and locally heavy rain in central and southern Arkansas during the afternoon and early evening.
